Memory Recall Game UI Design Report

Introduction

I designed a Memory Challenging Game called **"Dejavu"** to test and enhance users' visual memory and observation skills. The design was created using Figma with a modern gaming interface theme.

The task involves displaying a group of images (animals, birds, and sports players) for a limited time. After viewing, users must recall and select only the images they remember correctly.

The game focuses on improving concentration, short-term memory, and quick decision-making skills.

Components

The interface consists of five main screens:

1. Home Screen

- Displays the game title "Dejavu".
- Shows a short description: "Memory Challenging Game".
- Contains brain-related visual graphics to represent memory improvement.
- Includes a **Start button** to begin the game.

2. Rules & Regulations Screen

- Provides clear instructions before gameplay.
- Explains time limit and selection rules.
- Users must accept the rules before proceeding.
- Ensures structured and fair gameplay.

3. Viewing Screen

- Displays multiple grouped images (Animals, Birds, Players).
- Images are shown only for a limited time (e.g., 2–5 seconds).
- Dark neon gaming background improves visual appeal.
- Creates time pressure to test memory retention.

4. Recollection (Selection) Screen

- Shows a mixed set of images.
- Users must select only the images that appeared earlier.
- Includes circular selection indicators.
- Contains a clear **Submit button** to confirm answers.

5. Result Screen

- Displays total score (e.g., “You Scored 5/9”).
- Provides motivational feedback such as:
  - “Almost Done!! Keep Improving”
  - “Image Recalled Correctly”
- Encourages users to replay and improve performance.

Design Features & Enhancements

1. Modern Gaming Theme

- Dark background with neon gaming elements.
- Attractive and immersive interface.
- Improves user engagement.

2. Strong Visual Hierarchy

- Large stylized “Dejavu” title at top.
- Images arranged in structured grid layout.
- Clear Submit and Start buttons.

3. Interactive Elements

- Selectable circular indicators.
- Immediate transition between screens.
- Score feedback after submission.

4. Time-Based Challenge

- Limited viewing time increases difficulty.
- Enhances focus and concentration.

5. User Motivation

- Encouraging result messages.
- Score-based feedback system.
- Promotes repeated attempts for improvement.

Prototyping

Navigation follows a simple and logical flow:

Home → Rules → Viewing → Recollection → Results

Interactive buttons allow smooth transitions between screens.
The prototype ensures clarity, usability, and consistent design throughout the game.

The structured layout, proper spacing, and high-quality visuals make the interface user-friendly and visually appealing.

Dejavu

Rules And Regulation

1. The images in home page will be displayed for 5 seconds only.
2. After 5 seconds, the game will automatically move to Recollection page.
3. Players must carefully observe and memorize the images shown in Home Page.
4. In Recollecting Page, players must select only the images that appeared in Home Page.
5. Revisiting Home page is not allowed once the transition occurs.
6. Selecting any incorrect image will result in immediate elimination from the game.
7. No hints, pauses, or replays are permitted during gameplay.
8. The decision of the system is final and binding.

☐ Accept the Rules and Regulation
