Task Analysis & User Flow – Online Movie Ticket Booking System

Task Analysis

Task Analysis is the process of breaking down user interactions into smaller steps to understand how users complete a specific goal.

In this experiment, the goal of the user is to successfully book movie tickets through an online application.

This task analysis helps to:

- Understand user actions during ticket booking.
- Identify decision points such as login and payment method.
- Improve the efficiency of the booking process.
- Reduce user confusion during checkout.

Key Aspects of Task Analysis

• Identifying user goal – Booking a movie ticket.
• Understanding the sequence of actions from app opening to ticket confirmation.
• Recognizing decision points (Login/Register, Payment Method).
• Ensuring smooth navigation between steps.

User Flow

User Flow is a visual representation of the path users take to complete a task within an application.

In this design, the user flow represents the complete process of booking movie tickets from start to end.

User Flow for Online Movie Ticket Booking System

Start → Open App → Login/Register → Browse Movie Tickets → Search Seats → View Available Seats → Add to Booking → Open Booking → Review Booking → Proceed to Checkout → Enter Movie Info → Enter Payment Info → Payment Method → Confirm Booking → Booking Confirmation → Get Tickets → End

Step-by-Step Explanation of My Flowchart

Step 1: Start

• The user opens the movie ticket booking application.

Step 2: Login or Register

• If the user is an existing user, they log in.
• If the user is new, they must register before continuing.

Step 3: Browse Movie / Select Category

• The user selects a movie or category.
• They can search for available shows.

Step 4: Search and View Available Seats

• The system displays available seats.
• The user selects preferred seats.

Step 5: Add to Booking

• If seats are selected, they are added to the booking list.
• The user opens booking to review selected seats.

Step 6: Review Booking

• The user verifies selected seats and show details.
• They proceed to checkout if everything is correct.

Step 7: Enter Movie & Payment Information

• The user confirms movie details.
• The user enters payment information.

Step 8: Payment Method Decision

• User chooses payment method:

- Online Payment
- Cash on Delivery (if applicable)

Step 9: Payment Verification (Online Only)

• The system verifies the transaction.
• Payment confirmation message is displayed.

Step 10: Confirm Booking

• Booking is successfully confirmed.
• The system generates booking confirmation.

Step 11: Get Tickets

• User receives digital ticket.
• Option to continue booking or end process.

Step 12: End

• Booking process is completed successfully.

Decision Points in My Flowchart

• Login/Register decision
• Add to Booking decision
• Payment Method decision
• Continue Booking option

These decision nodes ensure flexible navigation and better user control.
