UID Exp:08

AIM:

To design and create storyboards (wireframes) for a mobile E-commerce application using Balsamiq, representing the complete user flow from browsing products to payment confirmation.

PROCEDURE:

Tool Used: Balsamiq Wireframes (https://balsamiq.com)

Created a new project and selected mobile (iPhone) frames

Designed multiple screens to represent the user journey

Used UI components like:

1. Buttons
2. Text fields
3. Images (placeholders)
4. Icons

Maintained a simple, clean, beginner-friendly layout

Connected all screens logically to show user flow from Home → Payment

USER FLOW SCREENS

The user flow of the mobile E-commerce application represents the step-by-step journey of a user from entering the app to successfully completing a purchase.

Home Screen → The user starts on the home screen where they can search for products, view offers, and explore featured items. From here, they can either directly add products to the cart or navigate to categories.

Categories Screen → The user selects a category such as Electronics, Fashion, or Groceries to filter products based on their interest.

Product List Screen → After selecting a category, a list of products is displayed. The user can scroll through items, view prices, and add products to the cart or choose a product for more details.

Product Details Screen → The user views detailed information about a selected product, including image, price, rating, and description. If satisfied, they add the product to the cart.

Checkout Screen → The user reviews all selected items, checks the total price, and enters the shipping address before proceeding.

Payment Confirmation Screen → The user selects a payment method (UPI, Card, or COD) and confirms the payment to complete the purchase.

1. Home Screen

Components:

Search bar (“Search products…”)

Banner placeholders (offers section)

Product grid (image + price + Add to Cart button)

Bottom navigation (Home, Categories, Cart, Profile)

Purpose:

Acts as the main entry point where users explore products and offers.

2. Categories Screen

Components:

Grid layout of categories:

1. Electronics
2. Fashion
3. Groceries
4. Books
5. Home Goods
6. Sports
7. Icons for each category
8. Bottom navigation bar

Purpose:

Helps users filter and navigate products easily based on categories.

3. Product List Screen

Components:

Scrollable product list

Each product includes:

Image placeholder

Product name (e.g., Vivo V30 Pro, AirPods Pro)

Price

“Add to Cart” button

Purpose:

Displays all products under a selected category for selection.

4. Product Details Screen

Components:

Large product image

Product name (e.g., Lenovo Ideapad Slim 5)

Price and rating

Product description/specifications

“Add to Cart” button

Purpose:

Provides detailed information to help users decide before purchasing.

5. Checkout Screen

Components:

Order summary (selected items with price)

Total amount

Shipping address field

“Proceed to Payment” button

Purpose:

Allows users to review order details and enter delivery information.

6. Payment Confirmation Screen

Components:

Payment options:

1. UPI
2. Card
3. Cash on Delivery

“Pay Now” button

Purpose:

Final step where users complete the transaction and confirm the order.

RESULT

Thus, the wireframes for a mobile E-commerce application were successfully designed using Balsamiq, representing a clear and simple user flow from product browsing to payment confirmation.
